

Company Profile

At SecuredNow we have one mission: To make the world a more secure place through embedded technology. With over a decade of experience, we are a fast-growing group of specialists committed to security and embedded development, whether it's working with our clients or through alliances with partners and other international security organizations that take security just as seriously as we do.

With headquarters in The Netherlands, SecuredNow strategically also has offices in Estonia, as it is a country widely known for being a global heavyweight in cyber-security.

Fields of Competence

We have a top quality R&D Security lab, allowing us to provide the most advanced and innovative services to optimize security in both hardware and software, specializing in embedded devices. Our team of seasoned security specialists has knowledge of the latest cyber-physical systems security and of the best embedded security techniques.

Consulting

SecuredNow offers customized guidance that adapts to our client's specific requirements. From helping design, develop and implement security in our client's product(s) to getting products certification-ready. Among our consulting services, we help clients to build Security by Design, implement Shift-Left Approach, guide them in software and hardware development or support them with security research.

Test & Evaluations

We know that Security Testing is crucial to ensure products are safe to use. We help our clients uncover security vulnerabilities in embedded products and devices so they can mitigate risks and prevent malicious attacks. We do this through: Tear Downs, Source Code Review, Penetration testing, Hardware attacks, Software Siege including infiltrations, and Reverse Engineering.

Training & Education

Our team of seasoned security specialists has knowledge of the latest embedded security techniques to harden cyber-physical systems. They are happy to share their knowledge and experience through custom-built, and out-of-the-box security trainings to help your development teams to grow in security by design.

Themen-Schwerpunkte

- Testing & Validation
- Modelling & Simulation
- Automation & Internet of Things
- Implementation & Integration
- Safety & Security
- Research & Founding
- Digitalization & Artificial Intelligence
- Coaching & Education

Certifications

We help our clients get their company/product(s) certification-ready. We provide SecuredNow's official stamp of approval.

Partnerships

Through strategic alliances, we help our partners customers with their security concerns and issues. This allows our partners to focus on their area of expertise while expanding their offering with our security services. Our proposition includes whitelabeling services (i.e. presenting it as 100% a service of the partner, billing through the partner) or as their security partner (i.e. redirection of responsibilities, separate billing).

Industry Sectors

- Manufacturing
- Broadcasting
- IoT & Mobile
- Healthcare
- Energy & Gas

Services

- Security Consulting
- Security Testing
- Security Trainings
- Product & Software Development

Products

- Product Risk Level Assessment
